EDUCATION

National University of Singapore (NUS)   **Aug 2019 - May 2023**

Bachelor of Science (Honours)

- Double Major in Data Science and Computer Science
- Relevant modules: Data Structures and Algorithms, Machine Learning, Operating Systems, Database Systems, Software Engineering

TECHNICAL SKILLS

- Programming Languages: Python, R, SQL, C, Java, JavaScript
- Tech Stacks: PostgreSQL, ReactJS, ExpressJS, Django
- Technologies: Git, Docker
- Others: Data Structures, Algorithms, Object-Oriented Programming

Work Experiences

Teaching Assistant | NUS   **Aug 2021 – Nov 2021**

- Teaching Assistant for CS2030: Programming Methodology II.
- Facilitated teaching of Object-Oriented programming, functional programming, and fundamental software engineering principles.
- Guided students through their weekly assignments and give feedback on their code submissions.

Data Analyst Intern | RushOwl Singapore   **June 2021 – Aug 2021**

- Perform API calls to obtain data from various government sources for analysis.
- Understand the geospatial features of Singapore and explore the correlations with commute experience and daily operations.
- Research on the commute pattern of platform users and generate service personalization and improve user satisfaction.
- Introduced a new and faster method for transport planning and for studying locations that need additional transport infrastructure.

Analytics Intern | NUS   **Dec 2020 – Jan 2021**

- Analytics intern for a Maritime Analytics Research Project under Professor Andrew Lim from the Department of Industrial Systems Engineering and Management (ISEM), Faculty of Engineering.
- Wrote scripts to conduct cleaning and processing of various maritime-related data (AIS, Vessels Stoppage Data) using Python.

- Analysed and conducted visualisations (vessels trajectories) to detect and remove noisy entries.
- Organised the datasets (splitting the datasets based on static and dynamic information) for use as input to predictive machine learning.
- Built a model using Adaptive Boosting Algorithm to predict whether a vessel will stop.

Projects

NewAddressBook   Aug 2021 – Nov 2021

- Developed a Java desktop app to help Singapore Secondary School teachers manage their contacts of students and colleagues, as well as keep track of upcoming meetings.
- Contributed production quality work to a medium-scale brownfield project.
- Technologies used: Java, JavaFX, Gradle, Junit, GitHub CI.

Fake News Classifier   Aug 2020 – Nov 2020

- Programming language used: Python.
- Used Natural Language Processing (NLP) techniques and word embedding techniques such as TF-IDF Vectorizer and Word2Vec to convert texts into numerical vectors.
- Explored and utilized various classification models such as ensemble learning.

ADDITIONAL INFORMATION

- **Languages:** English, Mandarin, Bahasa Indonesia and Hokkien
- **Interests:** Outdoor activities such as hiking, kayaking.
